

Robo.Camp

Spring 2018

Issue 2

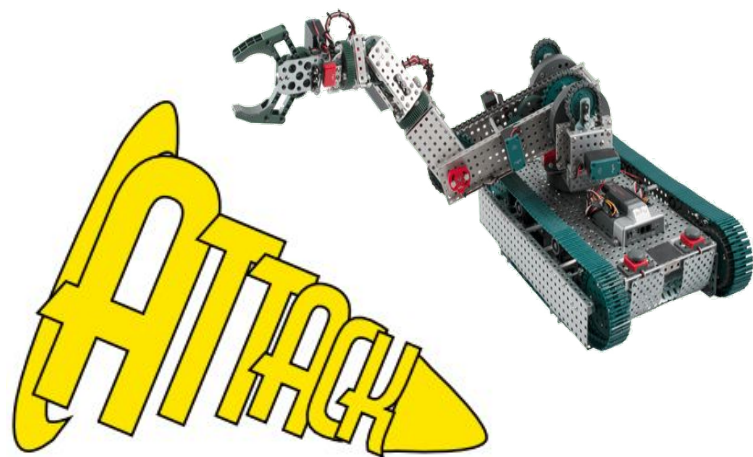

Educational Fun

Stack attack is based off of The Vex EDR and VEX IQ robotics building platforms creating a fun and intuitive experience for your child. The Robo.Camp curriculum will teach students basic mechanical knowledge such as gear ratios, and mechanical advantage, as well as base programming knowledge in RobotC

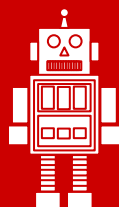

Bringing Back Open Field!

Stack Attacks game is played on a 12x12 Field for Vex EDR and a 4x12 Field for Vex IQ. For the past 4 years we have divided the field into 2 equal parts in order to promote offensive play. However this year we will be reintroducing a game mechanic where only a small portion of the field is open to both alliances. This zone holds the game pieces that both alliances will need to stack.
